AdaptaFi

ADAPTIVE FINANCE

The AdaptaFi partner program

Recommend AdaptaFi. Share in the rewards of the people you bring.

Partner introduction · November 2026

// THE IDEA

The partner program in one sentence

You recommend AdaptaFi.
When your referrals' bots make rewards, you receive a commission.

From the AdaptaFi fee

your referrals pay nothing extra

Up to 5 lines

line 1: 8%, lines 2-5: 3% each

From rewards only

never from deposits

Today: why AdaptaFi · the rules · 7 examples · how to talk about it · your materials

// WHY ADAPTAFI

Four things you can say with confidence

Your own account

Every bot lives in an account owned by your wallet. Only your wallet can withdraw.

Bots under licence

The bots come from an external technology provider. AdaptaFi uses them under lifetime licence.

Public pools on Base

Liquidity goes to public pools on the Aerodrome exchange, visible on BaseScan.

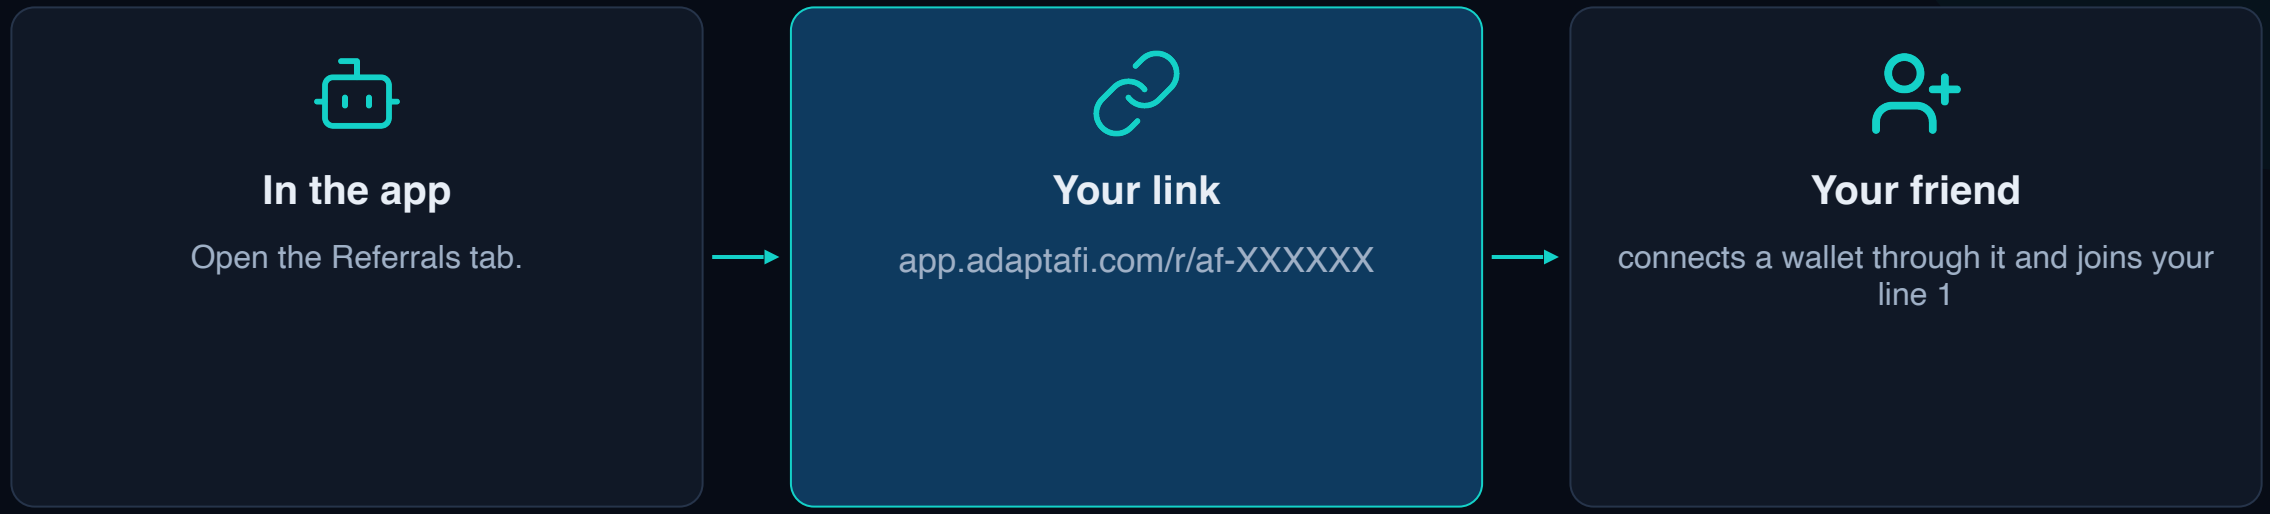

Real rewards

Rewards come from real liquidity mining, not from the deposits of new people.

// RULE 1

It all starts with your personal link

Early access: the app opens only for listed or invited wallets.
Your link is the invitation.

// RULE 2

Where the commission comes from

Bot rewards

of your referral, from liquidity mining

70% stays with your referral

30% AdaptaFi performance fee

Your commission

is paid out of this fee, to your wallet

Never from deposits. Your referral pays nothing extra. Nothing for the invite alone.

Risk: rewards depend on the market and can shrink or stop. Then commissions shrink or stop too.

// RULE 3

Five lines. Each one opens with your team.

Line 1	**8%**	opens with your own 500+ USDC
Line 2	**3%**	opens at 10,000 USDC in line 1
Line 3	**3%**	opens at 25,000 USDC in lines 1-2
Line 4	**3%**	opens at 50,000 USDC in lines 1-3
Line 5	**3%**	opens at 100,000 USDC in lines 1-4

up to

20%

of your team's rewards: 8% + 4 × 3%, paid from the AdaptaFi fee

// THE 50% RULE

The 50% rule: one person never opens a line alone

Line 2 opens at 10,000 USDC. One person counts for at most half of it: 5,000 (50%).

1 person: 10,000

Line 2 locked

counts 5,000 of 10,000. Missing 5,000.

2 people: 5,000 + 5,000

Line 2 open

5,000 + 5,000 = 10,000 counts.

Strong 8,000 + 3 people

Line 2 open

5,000 + 2,000 + 2,000 + 1,000 = 10,000 counts.

One person can never open a line alone: you need at least 2 people. What a strong person deposits above the half still earns you commission, it just does not count towards the threshold.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// RULE 4

Inactive? The commission moves up, not out.

8% from Ben's rewards skips Anna and goes to you

Compression: the commission of a person who does not qualify goes to the nearest qualified person above. It is not lost and does not go to AdaptaFi. The same when a line is not open yet: it goes to the nearest person above who has that line open.

// RULE 5

Two simple rules

No pay for invites

A commission comes only from real bot rewards of your referrals.

Commissions only from Rewards

Referral Commission are only paid from the users' generated rewards that come from liquidity mining.

// EXAMPLES

EXAMPLE

One formula for every example

Deposits in the line	×	Bot rewards	×	Line %	=	Your commission
USDC		assumption		8% or 3%		USDC

10,000 USDC × 10% × 8% = 80 USDC

In every example: bots make 10% in rewards. An assumption, not a promise.

Risk: the 10% bot reward is an assumption for the example. Real rewards can be higher, lower or zero.

// EXAMPLE A

EXAMPLE

Five friends, line 1 only

You

own deposit 1,000 USDC

- Friend 1: 1,000 USDC
- Friend 2: 1,000 USDC
- Friend 3: 1,000 USDC
- Friend 4: 1,000 USDC
- Friend 5: 1,000 USDC

Line 1: 5,000 USDC × 10% × 8%

40 USDC

your commission

Line 2 still closed

It opens at 10,000 USDC in line 1. Missing: 5,000 USDC.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// EXAMPLE B

EXAMPLE

A growing team opens lines 2 and 3

Line 1	10 people × 1,000 line 2 opens: 10,000 reached	10,000 USDC × 10% × 8%	**80 USDC**
Line 2	20 people × 1,000 line 3 opens: 30,000 in lines 1-2	20,000 USDC × 10% × 3%	**60 USDC**
Line 3	15 people × 1,000 45,000 in lines 1-3	15,000 USDC × 10% × 3%	**45 USDC**

Total

185 USDC

80 + 60 + 45

with bots at 10%

Line 4 opens at 50,000 USDC in lines 1-3. This team has 45,000 USDC, so 5,000 USDC is missing.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// EXAMPLE C

EXAMPLE

Compression: leaders with only lines 1-2

You	Adam	Beth	Carl	Dana	Eric	Frank
all 5 lines open	level 1	level 2	level 3	level 4	level 5	level 6
1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	

Frank deposits 10,000 USDC. His bot makes 10%: 1,000 USDC in rewards.

30 USDC	skipped	30 USDC	skipped	skipped	80 USDC
line 3: 3%	no line 3	line 2: 3%	no line 2	no line 2	line 1: 8%

Your 30 USDC: 10,000 × 10% × 3%, from 6 levels deep. Without compression: 0 USDC.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// EXAMPLE D

EXAMPLE

A large team, all five lines open

Line 1	50 people × 1,000	50,000 USDC × 10% × 8%	**400 USDC**
Line 2	75 people × 1,000	75,000 USDC × 10% × 3%	**225 USDC**
Line 3	100 people × 1,000	100,000 USDC × 10% × 3%	**300 USDC**
Line 4	125 people × 1,000	125,000 USDC × 10% × 3%	**375 USDC**
Line 5	150 people × 1,000	150,000 USDC × 10% × 3%	**450 USDC**

Total

1,750 USDC

400 + 225 + 300 + 375 + 450

500,000 USDC in total, all 5 lines open

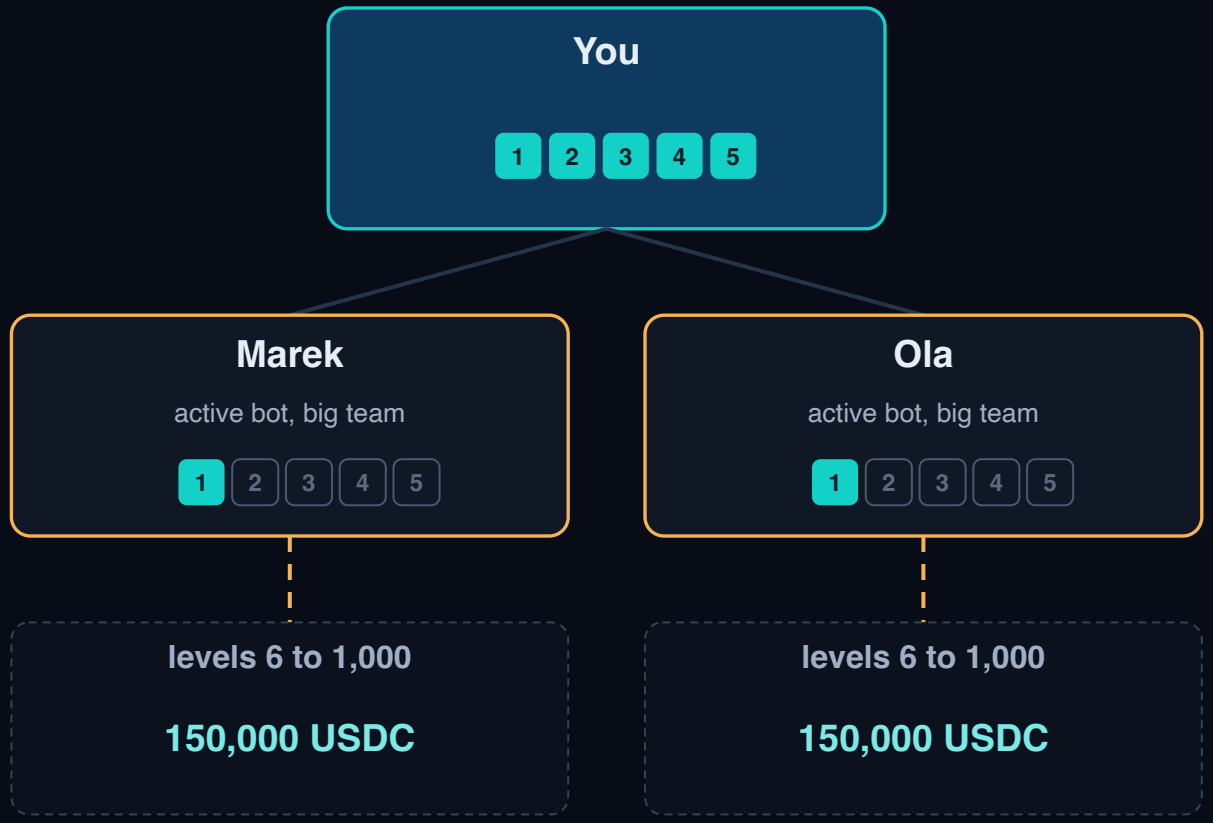

The people below you have not opened their own lines yet, so every share reaches you.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// EXAMPLE E

EXAMPLE

Compression in a large team

Marek's and Ola's own line 1 is still under 10,000 USDC, so their lines 2-5 stay locked.

The 3% skips them and reaches you

300,000 USDC × 10% × 3%

= 900 USDC

Together with Example D

1,750 + 900 = 2,650 USDC

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// EXAMPLE F

EXAMPLE

Compression step by step: a mixed team

You	Kate	Leo	Mia	Nick	Olga	Paul	Rob
all 5 open	level 1	level 2	level 3	level 4	level 5	level 6	level 7
1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	

Rob deposits 10,000 USDC. His bot makes 10%: 1,000 USDC in rewards.

30 USDC	skipped	skipped	30 USDC	skipped	30 USDC	80 USDC
line 4: 3%	no line 4	no line 4	line 3: 3%	no line 3	line 2: 3%	line 1: 8%

Each share goes to the nearest person above who has that line open. You get line 4: 10,000 × 10% × 3% = 30 USDC.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// EXAMPLE G

EXAMPLE

Hypothetical: 10, 100 and 1,000 levels deep

10 levels deep

with compression: 8 + 9 × 3

35 USDC

vs 20 USDC without compression

100 levels deep

with compression: 8 + 99 × 3

305 USDC

vs 20 USDC without compression

1,000 levels deep

with compression: 8 + 999 × 3

3,005 USDC

vs 20 USDC without compression

Hypothetical: everyone deposits 1,000 USDC, nobody below you has opened line 2. Line 1: 1,000 × 10% × 8% = 8 USDC. Each other person: 1,000 × 10% × 3% = 3 USDC.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// POWER OF COMPRESSION

With and without compression

	Without compression	With compression
Example D: large team	1,750 USDC	**1,750 USDC**
Example E: Marek and Ola, 300,000 deep	0 USDC	**900 USDC**
Example G: chain 1,000 levels deep	20 USDC	**3,005 USDC**
Total	**1,770 USDC**	**5,655 USDC**

The power of compression

> 3×

the same team, over three times more: 5,655 instead of 1,770 USDC

A line that your people have not opened yet is not lost: its share reaches you, until they open it. Hypothetical, all bots at 10%.

Risk: Example only, not a promise: rewards depend on the market and can shrink or stop.

// CALCULATOR

Try your own numbers in the calculator

Your assumptions

Your deposit, your team per line, your own bot reward %.

Open lines

Which lines are open and how much is missing for the next one.

The maths

How each commission is calculated, line by line.

A projection, not a statement. Never present it as a promise.

adaptafi.io → Calculator

// HOW TO RECOMMEND

Recommend honestly. It is what builds a team.

Do

- Add a sentence about risk every time
- Send technical questions to adaptafi.com/docs
- Use the ready materials without changing numbers

Don't

- Promise rewards or use words like "guaranteed"
- Send anyone data to paste into BaseScan
- Present yourself as AdaptaFi staff

"Providing liquidity carries risk. You can lose money. This is not financial advice."

// YOUR TOOLKIT

Everything you need is ready for you

Presentations

for Zoom calls and 1:1 meetings

Tutorials

step by step: wallet, access, deposit

Promo videos

short films ready to share

Graphics

for social media and messengers

Ready captions

copy and paste, numbers included

Calculator

show the rules on real numbers

All in one place: adaptafi.io

// YOUR LINK

Your own version of adaptafi.io

01

Copy your link

From the Referrals tab in the app.

02

Paste it on adaptafi.io

In the "Your link" section.

03

Share your page

Its Join button uses your link.

// NEXT STEPS

Start in four steps

01

Your account

Active bot, at least 500 USDC of your own.

02

Your link

Copy it from the Referrals tab.

03

Your page

Make it in "Your link" on adaptafi.io.

04

Share honestly

Ready materials plus the risk sentence.

// NEXT STEP

Recommend AdaptaFi. Honestly.

Up to 5 lines. Paid from the AdaptaFi fee. Never from deposits.
